

# 1. INTRODUCTION

When you enter the page, you will first see a welcome message and disclaimer. On the top half of the page is our conversation display area, where all conversations are displayed. The bot's dialogue avatar is on the left, and the user's dialogue avatar is on the right, with different colors. At the bottom of the page is our user input area, where user input for all functions is submitted. There are three function toggle buttons above the input box, which are 'Q&A', 'Fake tweet detection', and 'Covid test using cough'. The function highlighted in blue is currently in use.

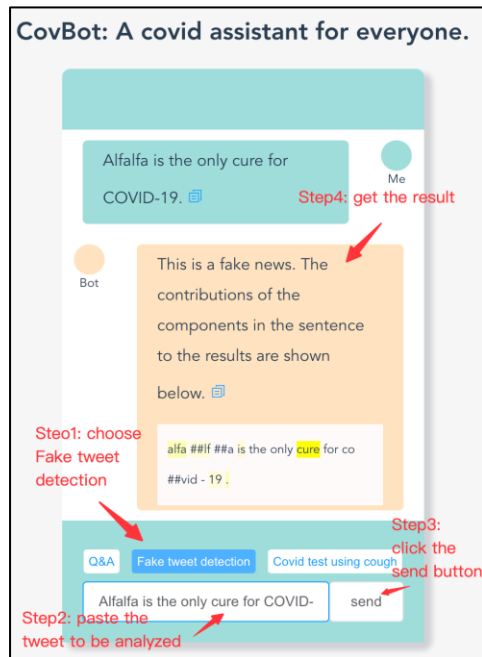

## 2. FAQ ANSWERING

You can enter this function by clicking the 'Q&A' button. Using the Q&A function is as simple as asking the chatbot your questions like a conversation with your friends. Due to the limited number of questions, when you ask some non-covid-related questions, or your question is not included in our list, the robot's answer may not be satisfactory.

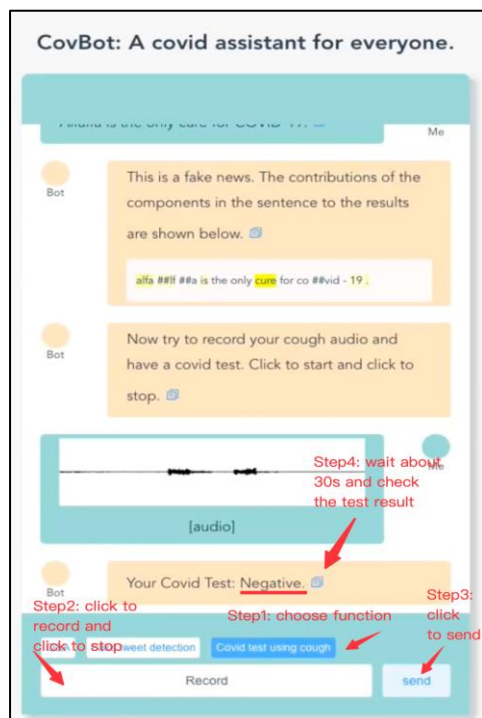

### 3. FAKE TWEET DETECTION

You can enter this function by clicking the 'Fake tweet detection' button. Then paste the tweet that needs to be analyzed, click send, and get the analysis result. If the bot thinks it's fake news, it also highlights which part of it caused it to be fake news.

### 4. COVID-19 SCREENING USING COUGH

You can enter this function by clicking the 'Covid test using cough' button. Then click the 'Record' button to start recording your cough and click the 'Stop' button to stop. Click the 'Send' button to upload the cough audio and check the result after about 30s.

## 5. LANGUAGE TRANSLATION

We support the translation of English text into Chinese, which may be useful when reading responses about covid. You can click the translation icon to the right of the text to get the Chinese translation.
